DOB 28/07/1999

SUMMARY

Aspiring **software architect** and **developer** who is passionate about developing web and mobile applications. I conducted several research studies during my final year of university all derived from my initial view of the world and **analysing the problems** in order to **find a solution**. My greatest strength would be the **ability to analyse things in multiple perspectives** and understand the problems it might encounter and providing solutions. Hence, I would devote myself to coming up with solutions in the real world in real world situation.

ACADEMIC PROJECTS

Jojo's Food Brisbane, AU

My final year project, Jolo's Food a food waste system where users can sell and buy rejected supermarket food at a lower cost due to the grading system. As part of a group project, I oversaw the design UI and UX experience of the website. (UQ private server)

<https://bitbucket.org/patapan/jojosfoods/src/master/>

- **Front End Developer (Front End Team Leader)**
- **Designer**

Ongaku Website Brisbane, AU

An individual University project. Ongaku is a video sharing platform like YouTube and Tik-tok where users can upload, like and comment on a video. Since it is an individual project, I was required to complete the website from the front end to the back end in a single semester.

/localhost

- **Full Stack Developer**

Utilizing Sorting Algorithms(Java) Kuala Lumpur, MY

A comparison of data using several sorting algorithms such as insertion sort, quick sort, etc. This project is done using Java as a form of visualization of how each sorting algorithm performs in milliseconds.
